Prevent cancer before it starts

GET TESTED

Colon cancer is the second leading cause of cancer death, and getting tested can literally prevent cancer before it starts. Testing can identify problems and finds growths before they become cancer. And if colon cancer is found early, you have a good chance of beating it with treatment.

If you are 50 or older, talk to your doctor about getting tested. For more information, contact the American Cancer Society at **1.800.ACS.2345 or visit www.cancer.org.**
