

# HPV CANCER PREVENTION

## 1 HPV VACCINE IS CANCER PREVENTION

HPV vaccine protects against HPV types that most commonly cause anal, cervical, oropharyngeal, penile, vaginal, and vulvar cancers.

Every year in Ohio  
1,157 people  
get cancer  
caused by HPV.

That's 3.2 people  
every 24 hours,  
all year long.

Most of these cancers can be prevented by HPV vaccine.

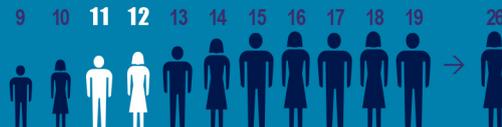

## 2 HPV VACCINE IS RECOMMENDED AT THE SAME TIME AS OTHER TEEN VACCINES

Preteens need 3 vaccines at ages 11 or 12. They protect against whooping cough, cancers caused by HPV, and meningitis.

## 3 HPV VACCINE IS BEST FOR BOYS & GIRLS AT 11-12 YEARS

Preteens have a higher immune response to HPV vaccine than older teens.

While there is very little risk of exposure to HPV before age 13, the risk of exposure increases thereafter.

Parents and healthcare professionals are the key to protecting adolescents from HPV cancers.

# VACCINATE YOUR 11-12 YEAR OLDS.
