

<p style="text-align: center;">TECHNICAL NOTES: 2000 – 2004 OHIO REPORTABLE DISEASES</p>

Infectious Disease Surveillance System:

The diseases included in this report are part of a passive surveillance system, where laboratories and health care providers report cases without being actively contacted in a systematic manner. Therefore, these numbers do not represent a complete enumeration of all incident cases. A significant percentage of persons with these diseases are not specifically diagnosed or even seek treatment, so the true number of persons with these diseases is unknown. Even though only a portion of cases are reported, these data provide valuable insight into the demographic, geographic and secular trends for these diseases.

Explanation of Tables:

Data reflect disease incidence for Ohio residents only, but include diseases (malaria, for example) acquired by Ohio residents while traveling out-of-state or overseas. Individual cases were reported through the Ohio Disease Reporting System (ODRS) beginning in September 2001.

2004 data are presented by date of disease onset with the exception of chickenpox, acute hepatitis B, chronic hepatitis B, acute hepatitis C and past or present hepatitis C. Chickenpox, hepatitis B and hepatitis C are shown by date of report for 2004. Previous annual summaries from 1992 to 2003 were shown by date of report.

Population data for the “By Year of Report” table are from the U.S. Census Population Midpoint Estimates for each year. Population data for all other tables are from the 2000 U.S. Census. Midpoint estimates by age, gender and county are unavailable for 2004.

In the “By Year of Report” table, the mean and median are calculated only when five years of data are available.

“Age” refers to the patient’s age at the earliest known date associated with the disease.

“Month” refers to the month of onset of symptoms, except as noted above.

“County” refers to the patient’s county of residence. If a county of residence is unknown, then the county in which the hospital, physician or local health department is located is used.

Case Criteria:

For all diseases, the case criteria used are those provided in: “Case Definitions for Infectious Conditions Under Public Health Surveillance,” MMWR (Morbidity and Mortality Weekly Report) 1997; 46 (No. RR-10), and the Ohio Department of Health (ODH) Infectious Disease Control Manual (IDCM). This summary includes confirmed, probable and suspected cases.

Notes on Specific Diseases:

Chickenpox (a Class B disease): only the number of cases by month and county are reported. Chickenpox is a class B reportable disease. It is reported in aggregate form on a weekly basis. Date of onset is not reported; therefore, all data are compiled by date of report.

***E. coli* Shiga Toxin Producing (Not O157:H7):** became a reportable disease in Ohio in February 2001. Cases listed in the year 2000 were received at ODH prior to becoming a reportable condition in Ohio.

Ehrlichiosis: became a reportable disease in Ohio in February 2001.

Encephalitis, Lacrosse: case reporting to CDC through ArboNet began in 2003 by the ODH Bureau of Infectious Disease Control, Vector-borne Disease Program. ArboNet is an electronic-based surveillance system created by the CDC to streamline arboviral disease reporting from state public health departments. Additional information on arboviral diseases can be found at <http://www.odh.ohio.gov/odhPrograms/idc/zoodis/vbdp/vbdppfs.aspx>.

Encephalitis, Post Other Infection: includes encephalitis following a non-central nervous system viral illness or after vaccine was administered.

Encephalitis, West Nile: the first human case in Ohio was reported in August 2002. Case reporting to CDC through ArboNet began in 2003 by the ODH Bureau of Infectious Disease Control, Vector-borne Disease Program. ArboNet is an electronic-based surveillance system created by the CDC to streamline arboviral disease reporting from state public health departments. Additional information on vector-borne diseases can be found at <http://www.odh.ohio.gov/odhPrograms/idc/zoodis/vbdp/vbdppfs.aspx>.

Hepatitis: chronic cases of Hepatitis B and C became reportable in 2003; therefore, counts prior to 2003 include acute cases only. "Month" refers to the month the case was reported to CDC (MMWR month).

Meningitis, Other Bacterial: includes cases of bacterial meningitis for which the agent was specified, excluding Group A *Streptococcus*, Group B *Streptococcus* (in newborns), *Haemophilus influenzae*, *Listeria monocytogenes*, invasive *Streptococcus pneumoniae* and *Neisseria meningitidis*.

Outbreaks (Food-borne, Water-borne and Unspecified): numbers indicate the number of outbreaks reported and do not reflect the number of cases involved in the outbreak. Therefore, outbreak data are not included in the "Age in Years" and "Gender" tables. The source of outbreak data is the ODH Bureau of Infectious Disease Control, Investigation Section. One multi-state outbreak (onset in July 2004) is not included in the "County" table; therefore, county tables do not match onset totals. The Ohio counties involved were: Lorain, Mahoning, Medina, Stark, Summit and Tuscarawas.

Rabies, Animal: refers only to cases among animal species. The last reported case of human rabies in Ohio occurred in 1971.

***Streptococcus pneumoniae*, Invasive, Age < 5 Years:** became nationally notifiable in 2003 for all children less than 5 years of age regardless of drug resistance pattern.

***Streptococcus pneumoniae*, Invasive, Drug Resistant, Ages 5+:** became nationally notifiable in 2003 for all ages with antibiotic resistance. Numbers include cases 5 years of age and older with intermediate resistance or resistance to one or more antimicrobial agent.

***Streptococcus pneumoniae*, Invasive, Drug Susceptible, Ages 5+:** numbers include cases 5 years of age and older with invasive *Streptococcus pneumoniae* that is susceptible or of unknown susceptibility to any antimicrobial agent.

Vancomycin-Resistant Enterococcal Disease: no longer reportable in Ohio as of April 14, 2003. Data for 2003 reflect cases with disease onset dates from Jan. 1 through April 13, 2003.

Diseases Not Included in Tables:

There were no known cases in Ohio of the following reportable diseases during at least the past five years, thus they are not included in the 2000-2004 disease tables: anthrax, botulism - other, cholera, diphtheria, encephalitis (post mumps and St. Louis), hantavirus, human rabies, measles (indigenous), plague, poliomyelitis, Reye's syndrome, rubella (not congenital), typhus fever (louse-borne) and yellow fever.

Diseases not included in the "Age in Years," "Gender," "Month of Onset" and "County of Residence" tables had no known cases reported in 2004.

HIV/AIDS, sexually transmitted diseases and tuberculosis surveillance data are not included. Please refer to the ODH Web site for summary reports for these diseases at <http://www.odh.ohio.gov/healthStats/disease/id1.aspx>.

Special Note on *Salmonella* Serotypes and Meningococcal Disease Serogroups:

The Bacteriology Laboratory at the Ohio Department of Health performs serotyping of *Salmonella* isolates and serogrouping of *Neisseria meningitidis* isolates. Hospital and other clinical laboratories are encouraged to send *Salmonella* and *Neisseria meningitidis* isolates to the ODH Lab for serotyping and serogrouping. For further information on the submission of isolates, please contact the Bacteriology Laboratory at (614) 644-4656.
